Calderwick Aerospace Systems
Huntsville, AL
Principal Mechanical Engineer, Test Equipment Design (CAS-10482)

Dear Hiring Manager:

I am writing to express my interest in the Principal Mechanical Engineer position on the Test and Evaluation team at Calderwick Aerospace Systems. I have spent the last six years designing test stations, fixtures, and laboratory systems for a government test center, and the work described in your posting is the work I already enjoy doing every day. I take a lot of pride in the hardware I release, and I think it shows in the care I put into my drawings and in how my builds go together on the shop floor.

In my current role I am the primary design engineer for a component test and calibration laboratory. Most recently I led the redesign of a legacy valve test station, where I designed the pneumatic and fluid systems, built the bill of materials, wrote the acceptance test procedure, and stayed with the build through fabrication and checkout. The new station came in 22% lighter than the one it replaced. That project is a fair picture of how I like to work, which is owning a design from the first sketch until a technician is running tests on it.

I want to be upfront about two items in your posting. My daily design tools are PTC Creo and Windchill rather than NX and Teamcenter. I have used NX to prepare geometry for analysis in a previous role, and since the modeling, drawing, and release practices carry over directly I expect that transition to be a short one. I also do not hold a security clearance today. I am a U.S. citizen and I am able to obtain one.

Beyond the technical side, I am easy to work with and I communicate well with machinists, technicians, and buyers, which I have found matters as much as the design itself when a build is on a schedule. I have enjoyed mentoring the junior engineers on my team and would look forward to doing the same on yours. I would welcome the chance to talk about how my background can contribute to your test programs.

Thank you for your consideration. Please do not hesitate to contact me if you have any questions.

Sincerely,

John Doe
